

Key to diagnostic excellence

PATHOLOGISTS LANCET KENYA, hereby referred to as Lancet Kenya, is pleased to introduce a new ultramodern independent pathology laboratory in Nairobi. We provide direct laboratory services at affordable and competitive pricing to patients and clients from doctor's offices/suites, clinics, surgeries, hospitals, industries, HMOs, medical insurances, corporate firms, government and non-governmental agencies and other establishments such as the armed forces and sport teams. We also provide consultative and referral services to other laboratories and hospitals.

Years of Experience: Lancet Kenya is part of Lancet Group of Laboratories internationally which has over 55 years experience in professional diagnostic pathology service. Lancet Kenya - duly incorporated in Kenya - is owned and run through joint partnership between the Lancet Group and Dr Ahmed Kalebi MBChB (Nbi), MMed Path (Nbi) FC Path (SA) - a young, locally and internationally trained Kenyan pathologist. The Lancet Group currently processes over 20,000 patient specimens a day in South Africa, Botswana, Namibia, Swaziland, Lesotho,

Zambia, Mozambique, Uganda, Ghana and now Kenya. Our pathologists and technical staff linked across the group through fiber-optic connectivity are available round the clock to answer your queries and to offer any assistance that you may require. Lancet Kenya has over 30 young Kenyan professionals running the ultramodern facility at Upper Hill Nairobi (opp. Traffic HQ) backed by over 3000 employees of the Lancet Group across Africa. We look forward to being of excellent services to you.

Collections of Specimens and Delivery of Reports: We have an excellent infrastructure for collection of specimens from patients and clients, and for delivery of results electronically and through courier. We operates 7 days a week throughout the year including weekends and public holidays, with extended hours working till late to cater for our clients, clinicians and the public.

Services Offered: We offer range of tests covering medical-clinical investigations, research, health screening, paternity testing, genetic screening and industrial and environmental occupation health. These include Histology, Cytology, Immunohistochemistry, Clinical Chemistry, Endocrinology, Immunology, Serology, Haematology, Microbiology, Virology, Advanced Chemistry and Toxicology, Genetic Screening, Paternity Testing as well as sophisticated Molecular and Cytogenetic investigations
